Responsibility, *Program Development

ABSTRACT

ERIC

Experience has indicated that state-level direction and leadership can help the community junior college realize its objectives. With this in mind, the author discusses the nature and requirements of such cooperation. For example, the chief functions of a state director could include promoting the junior college program, providing leadership for its planning and development, and coordinating state-wide junior college research. This would require placing greater emphasis on planning and coordination than on supervision and regulation. Establishment of the director's role could involve such items as definition of the nature and function of the position, subsequent delegation of necessary implementing authority, and insulation of the position from partisan political influence. The functions of Florida's state director in his role as Assistant Commissioner of Education and as Executive Officer of the State Junior College Board provide a current example. The monograph concludes with a nationwide comparison of directors' assigned responsibilities, and of average annual salaries, salary increases, and other benefits. A selected bibliography is included. (JO)

FOREWORD

The development of community junior colleges in the various states has become an outstanding development in the educational history of the United States. The similar development of state level coordination and/or control of these institutions has also been an important phenomenon.

In 1957 a small group of people who held state level positions related to community junior colleges met with Dr. S. V. Martorana and Dr. D. Grant Morrison in the offices of the United States Office of Education in Washington, D.C. These individuals held positions with titles such as: State Director of Teacher Education; State Consultant for Junior Colleges; Executive Dean of Community Colleges; State Supervisor of Secondary Education; and similar designations.

During that meeting the Legislature of Florida passed the laws which placed Florida on the road to completing a Master Plan for community junior college development. As one of the first states to provide full time leadership at the state level, Florida's implementation of its Master Plan has attracted a great deal of attention and in some respects has become a predictor for future direction in other states. Certainly the creation of the positions of the full time state officer and his staff is recognizable as one of these predictors.

This report is designed as the first of a series of studies which will consider the development of state level leadership in the community junior colleges.

The series is a part of a research and service program partially financed under a grant from the W. K. Kellogg Foundation to the Southeastern Junior College Leadership Program (University of Florida and Florida State University). The particular survey used as a basis for this study originated with Dr. Richard Wilson, Director, New Institutions Project of the American Association of Junior Colleges.

Mr. Jeffrey Stuckman and Mr. William Gager participated in the development of the report in their capacity as Kellogg Fellows at the University of Florida.

I am indebted to the contributions of these persons, but I will admit responsibility for this final draft. It is not a complete report but rather hints at much more research which will be needed in order to describe, evaluate, and improve the Office of the State Director of Community Junior Colleges.

May, 1963

James L. Wattenbarger

SECTION I

The Position, Functions and Responsibilities of the State Director for Community Junior Colleges

The position of the state officer who is responsible for community junior colleges is relatively new and still in the formative stage. Although twenty-three states now report a full time position, and twenty other states report a person who spends part of his time dealing with state level coordination and/or control of community junior colleges, more than half of these positions have been created since 1959. (The earliest was in 1928.) One of the most prevalent reasons leading to the creation of such positions is the desire on the part of state legislatures and state officials to eliminate excessive duplication and to hold down costs in programs found in the complex and burgeoning junior college systems.

Formerly, the majority of the positions of state directors for community junior colleges were located within the State Board of Education or State Department of Education structure. However, more recent trends (especially during this decade) have resulted in a shift, placing the

Cf. Hall, C. Wayne. "The Status of the State Officer Responsible for Junior College Education." <u>Junior College Journal</u>, 38 (March, 1968), pp. 32-34.

position under a state higher education board or under a separate state junior college board. Regardless of the organizational location of the position, the state directors have had to assess their responsibilities and develop their roles without the benefit of either preparational experience or inservice programs to aid them. Several universities have developed programs for such individuals who will hold such positions (University of California at Berkeley, University of Florida, and Unir versity of Michigan are three examples).

The importance of this position may be pointed up by the fact that the appropriate development of this role will most likely determine to a considerable extent whether or not the ideals of the comprehensive junior college will be fully realized. Experience has already indicated this to be true.

In this study, Hall found mutual agreement among junior college chief administrators, a select group of junior college authorities, and state officers responsible for junior college education that the position does not carry authority commensurate with the mandated responsibilities. These three groups also reported that the chief functions which the state director should perform are:

- 1. Provide leadership as an articulate state spokesman in promoting the comprehensive junior college program.
- 2. Provide leadersh p in developing, defining and coordinating a state-wide junior college plan.
- 3. Clarify the functions and roles of the junior colleges; design criteria for the orderly establishment of new junior colleges.
- Provide and coordinate state-wide junior college research;

encourage and coordinate research in the local junior colleges.

- Advise, recommend, and consult with state officials and legislators concerning the improvement of junior college legislation and finance.
- 6. Frepare, present, and defend the state junior college budget.
- 7. Advise and consult with local junior college officials, particularly in the areas of legislation, finance, and budget.
- 8. Maintain junior college standards and administer state board policies and requirements.

With the current emphasis being placed on the role of leadership, on the function of state level spokesmen, and on the development of a state junior college master plan, the chief functions of the director should be to serve as the principal state coordinator of and as the key state spokesman for community junior college education. In carrying out these functions the state director's main responsibility should be to provide leadership in the designing and implementing of the junior college master plan. Pursuant to this plan, it would largely be the responsibility of the state director to bring together harmoniously the values of state-wide coordination and the vigor of local control and responsibility. He must of necessity be a planner and coordinator as differentiated from a supervisor or regulator.

Requisite to the optimum implementation of the state director's prescribed functions, each state board responsible for community junior college education should consider the following, among other elements, as being essential to the position's role:

- 1. The nature and function of the position should be defined.
- Ample authority and responsibility should be provided for this position.

- 3. All junior college functions should be coordinated through this office.
- 4. The position should not be involved in partisan politics.
- 5. The state officer should have direct organizational access to, and commensurate authority and status with, the state board responsbile for junior college education.
- 6. Adequate support must be provided.
- 7. Specific preparation for these kinds of responsibilities either through preservice or inservice study should be emphasized.

SECTION 11

An Example: Florida

The position of State Director of Community Junior Colleges was first established in Florida in July, 1957. The position was placed within the organization of the State Department of Education as a Director of a Division. In a reorganization of the Department in 1967 the title of Division Director was changed to Assistant (State) Superintendent, Community Junior Colleges. More recently (January 1969), as a result of a new State Constitution this title became Assistant Commissioner of Education, Community Junior Colleges.

In reality, however, the person holding this position has filled a dual role. The first state level position was that of Director and Secretary to the Community College Council. This Council was created by the 1955 Legislature to develop a long range plan for community junior college expansion in Florida. The plan was presented in April, 1957, and approved by the State Board of Education and the Legislature. Upon approval of the Master Plan the Community College Council went out of existence.

The new position created at that time in the State Department of Education was in great measure a continuation of the position of Director of the Community College Council.

During the next few years the involvement of the State Junior College Board required that this additional role was to be continued. The result

has been that the State Director in Florida now holds two titles:

Assistant Commissioner of Education and Executive Officer of the State

Junior College Board. In these two roles he carries out the functions

of state level leadership. The specific description of his major responsibilities has been outlined in a policy statement of the State Junior

College Board as follows:

- 1. Serve as a professional staff for the State Junior College Board.
- 2. Gather data, make studies, interpret data and develop recommendations concerning all matters which have to do with the development of community junior colleges in Florida.
- 3. Recommend to the State Junior College Board for recommendation to the State Board of Education new areas for the development of community junior colleges, in accordance with provisions of the long range plan adopted by the State Board of Education.
- 4. Develop and implement plans and standards of quality for the administration, operation, physical plant development, and accreditation of community junior colleges, in accordance with the regulations of the State Board of Education.
- 5. Administer disbursement of Minimum Foundation Program funds and Capital Outlay funds for junior colleges.
- 6. Collect, review, summarize, and publish statistics and other official reports from and about the community junior colleges.

Activities of the Division of Community Junior Colleges

- 1. Consult with members of the State Junior College Board and carry out the policies and instructions of the Board.
- Serve as Chairman of the Junior College Presidents' Council,
 the Council of Academic Affairs, the Council of Financial

Affairs, and as the Executive Secretary of the Florida Junior College Conference.

- Collect and publish such materials as contribute to the understanding, evaluation, and development of the community junior college program in Florida.
- 4. Serve as liaison with other divisions within the State Department of Education.
- 5. Work with the Board of Regents to assure coordination of the program of higher education in Florida.
- 6. Work with localities in Florida on problems connected with the establishment and operation of community junior colleges
- 7. Confer as consultants in the development and planning of curriculum and other matters relating to the sound operation of community junior colleges.
- 8. Conduct building surveys and approve sites for community junior colleges.
- 9. Serve as consultants on educational and architectural planning of all community junior college buildings.
- 10. Review accreditation reports and organize evaluation committees for applying standards of accreditation.
- 11. Check, analyze, and process applications for accreditation.
- 12. Compute the Minimum Foundation Program for each college.
- 13. Check, analyze, and recommend approval of budgets and financial statements.
- 14. Work with other agencies in all matters relating to community junior colleges (e.g., State Board of Nursing, Industrial Com-

mission, Educational Television Commission, University System [Board of Regents], etc.).

- 15. Conduct research on teacher utilization, building utilization, and related topics.
- 16. Request release of funds as authorized and as needed for individual colleges, maintaining accounting for these disbursements.
- 17. Interpret the community junior college program to lay, professional, and governmental groups.

appropriate staff to carry out all of these responsibilities. The analysis of that staff will be reserved for another study; suffice it to say at this point that Florida uses five other professional people on the state level staff in addition to the Director.

This summary of a single state is not intended to present an ideal structure. It does provide, however, an example of what may be found in one state. The historical development, the range of responsibilities, the legal assignments, the number of institutions, and the organizational structure will determine in great measure which activities any specific State Director will carry on. Further study will be needed to evaluate the importance of these activities, the extent to which they may impinge upon institutional integrity, and the guidelines for assessing quality.

SECTION 111

Responsibilities and Compensation of State Directors of Community Junior Colleges

In the fall of 1968 a survey of responsibilities and compensation of state directors of community junior colleges was initiated by the American Association of Junior Colleges. The questionnaires were sent to each of the fifty states, and fifty replies were received.

The responses fell into three groups. The first group of twenty-three states had officials entirely concerned with activities directly related to two year colleges. The second group of twenty states had an official concerned with most of the responsibilities outlined on the questionnaire in addition to other responsibilities. The third group of seven states indicated that no one was specifically assigned responsibilities concerned with two year colleges at the state level.

Examination of the summary of responsibilities gives some profile of the scope of duties. For instance, in group I (those with full time responsibilities) the most common responsibilities are gathering data, establishing guidelines for evaluating operations, reviewing construction plans, and reviewing curriculum plans, and these functions are done by everyone. The least common responsibilities are evaluating credentials for presidents, approving construction plans, and approving budgets, yet these functions are done by more than two-thirds of the full time state directors.

ے رسپوند

As would be expected, the scope of responsibilities of officials with shared-time duties appears to be more restricted than for full time directors or coordinators. However, the duties that were least common for full time directors are in general also least common among shared-time officials, and vice versa. If frequency of assignments are ranked, in no case is there a change of more than two ranks between group I and group II.

In looking at salaries and benefits, attention is focused on full time two year college officials because there is no apparent pattern in the primary duty of officials with shared time responsibilities in the two year college area. Respondents in group II range from chancellors of state university systems to directors of teacher education services in the State Department of Education, and range in salary from about \$11,000 to \$40,000. Emphasis in the analysis itself is placed on regional comparisons rather than correlations of salary with type of state coordinating or control structure, detailed function of the job, number of colleges in the system, or past experience of the incumbent.

The mean annual salary in group I is \$21, 875. The median is \$21,500. The range is from \$13,596 to \$30, 500. The average increase during the past year from previous annual salary was \$1,372.

When states are ranked by salary and grouped according to arbitrary

regions*, the Pacific region states are all in the upper third of the salary ranking, North Central region states are polarized in the upper and lower quartiles, South Mountain states are divided between the upper middle and lower middle quartiles, the modal response of the East Coast states is in the middle third, and the modal response of South Central states is in the lower quartile.

Prevailing practice in regard to other employee benefits is shown on page 13. It is particularly interesting that the states with lower salaries do not appear to compensate with higher benefits. Of the four-teen states providing medical and hospital contributions, 57 per cent paid salaries above the mean; and of the five states making 100 per cent of the contribution, four paid salaries above the mean. Of the nine states making contributions to major medical coverage, 56 per cent pay salaries above the mean. Of the ten states contributing to life insurance, 60 per cent pay salaries above the median.

* Regions are divided as follows:

East Coast: Maine, New Hampshire, Vermont, Rhode Island,

Connecticut, Massachusetts, New York, Pennsylvania, New Jersey, Maryland, Delaware, Virginia, West Virginia, North Carolina, South Carolina,

Georgia, Florida;

North Central: Ohio, Indiana, Illinois, Michigan, Wisconsin,

Missouri, Kansas, Iowa, Nebraska, South Dakota,

North Dakota, Minnesota;

South Central: Kentucky, Tennessee, Alabama, Mississippi,

Louisiana, Texas, Arkansas, Oklahoma;

Pacific: California, Oregon, Washington, Alaska, Hawaii;

South Mountain: Nevada, Utah, Colorado, Arizona, New Mexico;

North Mountain: Montana, Idaho, Wyoming

The median contribution to retirement received is 6 per cent of basic salary. Of states contributing to retirement above the median, 43 per cent pay salaries above the mean. Put another way, the average contributions of states paying above the mean salary is about 6.3 per cent compared with 5.3 per cent by states paying below the mean salary.

Arrangements to permit time for consulting are mentioned in ten states. In seven of the ten cases the number of days provided is flexible, and where the time is specified the average number of days provided is eighteen days per year. In five cases, no time for consulting is allowed.

In seventeen cases or 74 per cent of the states of group I, transportation was provided either by a car being assigned (nine cases), a car being provided as required (four cases), or a car allowance being paid. In the remaining six cases, there is ambiguity as to whether a negative response was intended to mean that a car is not assigned to the director, or that a car is not provided as required.
